# Removing Lens Port

# Perform Water Leakage Test

Once Vacuum Analyzation is completed successfully and Vacuum Valve Protection Cap is secured, review the housing further by checking for water leakage. Submerge it in a shallow water tank. While submerged, activate all the control buttons, control switches, and control knobs in order to have a dynamic test to prove all the sealed moving parts are water sealed properly. If there is no water droplet observed inside the housing after Underwater Dynamic Test, it means the housing is fully watertight. If water leaks into the housing, the water droplets will be detected by the Wet Sensor Strip located in the lowest part of the housing. Multi-control Device will display “LEAKING”, Water Leak Alarm will make “BEEP-BEEP-BEEP” sound.

# Summary of Signal Indicator Color Codes Indication

Signal Indicator	Indication	Next Action
Blue Blinking	Ready for Vacuuming	Vacuum Pumping
Yellow Blinking	Vacuum below desired level	Continue pumping
Yellow and Red Blinking alternately	Vacuum above desired level	Twist the red colored Vacuum Release Tip counterclockwise
Yellow Still	Vacuum analyzation in progress	Wait approx. 3 minutes for vacuum analyzation
Green Blinking	Vacuum analyzation test has passed	Ready to go into the water
Red Blinking	Vacuum analyzation test has failed	Inspect the housing for any potential air leakage sources
Red Still + 5 Sec Audible Alarm	Wet Sensor Strip detects water droplet or moisture	Inspect the housing for any potential water leakage sources
Blue or Green 1 Blink / 10 sec.	In Sleeping Mode	Operate the Camera to wake up
Red-Green-Blue Cycle Blinking	System Error	Contact AOI Service Center
